

Women Safety App

Comprehensive Information Architecture & Functional Hierarchy Map

System Document: This formal structural manual maps the navigational depths and structural tiers of the Women Safety App. Optimized for emergency scenarios, it ensures high-priority functionality is readily discoverable via deterministic structural pathways.

1. Primary Structural Architecture (Main Core Tiers)

EMERGENCY SOS

- **Trigger SOS:** Initial interactive portal sequence activating immediate emergency protocols.
- **Countdown Screen:** System fail-safe layer allowing immediate cancellation of false triggers.
- **Share Location Automatically:** Automated live system telemetry generation background pipeline.
- **Alert Sent to Contacts:** Simultaneous multi-channel cellular/data broadcast to established trusted profiles.
- **Emergency Services:** Secure integration endpoint initiating standard direct dial-out vectors to regional authorities.

LIVE LOCATION SHARING

- **Share Live Location:** Spawning of real-time continuous dynamic cryptographic tracking telemetry.
- **Select Duration:** Time-to-live (TTL) configuration constraints defining transmission windows.
- **Select Contacts:** Direct address book security scoping layer defining targeted viewers.
- **Stop Sharing:** Immediate physical termination of telemetry broadcast instances.
- **Sharing History:** Local metadata archival repository indexing historic session states.

SAFE ROUTES

- **Enter Destination:** User-defined targeted geographic destination coordinate input.
- **View Safe Routes on Map:** Specialized geometric map layers plotting parameters prioritized via dynamic safety criteria.
- **Safety Score & Info:** Multi-factored predictive safety indexes contextualized with historical localized data profiles.
- **Share Route:** Outbound destination pathway serialization engine shared with selected users.
- **Go with Live Tracking:** Execution phase leveraging precise localized background position-tracking heuristics.

EMERGENCY CONTACTS

- **Add Contact:** Step-wise workflow instantiation interface:
 - Name Data Capture Field
 - Phone Number Formatting & Validation Engine
 - Relationship Parameter Attribute Assignment
 - Save Contact Transaction Finalization
- **Manage Contacts:** Profile database state mutators:
 - Edit Contact Attributes
 - Delete Contact Entity
 - Reorder Contacts Display Priority Matrix

INCIDENT REPORTING

- **Report Incident:** Launching a structured document sequence tracking anomalies or active threats.
- **Incident Type:** Dropdown taxonomy schema classification (e.g., harassment, physical threat, infrastructural hazard).
- **Add Details:** Text description area for contextual situational profiling.
- **Upload Photo / Video:** Binary large object (BLOB) data attachment for localized evidence collection.
- **Submit Report:** Dispatch engine directing completed datasets to safe remote processing servers.
- **Report History & Status:** Interactive status dashboard tracking administrative actions or updates.

SAFETY TIPS

- **Personal Safety Tips:** Curated tactical directives regarding direct spatial physical protection and active awareness.
- **Travel Safety Tips:** Specialized advice regarding public mass-transit grids, night-time commutes, and unfamiliar pathways.
- **Digital Safety Tips:** Preventative action frameworks managing device parameters, privacy permissions, and network vectors.
- **Emergency Guide:** Low-latency high-density informational documentation for acute situational management.
- **Videos & Resources:** Native content aggregation system hosting streaming informational and instructional assets.

PROFILE & PREFERENCES

- **Settings Module:** System runtime mutator variables:
 - Notification Channels & Priority Toggles
 - Privacy & Cryptographic Data Sharing Clearances
 - App Language Internationalization Rules
 - Dark Mode Visual Presentation Toggles
- **Help Center:** Support tier interface:
 - Frequently Asked Questions (FAQs) Knowledge Base
 - Contact Us Secure Communications Link
 - Feedback Capture Engine

2. Global & Common Persistent Infrastructure

These architectural endpoints are instantiated at the root scope level, ensuring consistent access across any context inside the mobile ecosystem workflow.
